BS-STYLE POINT RC TIME ATTACK

RULES AND SCORING v2 | TECH-ARTS CRAWLER | DRY-RUN RELEASE v27.6.0

1. Competition format

• The default event has four Special Stages: SS1, SS2, SS3 and SS4.

• Default cutoffs are SS1 10 minutes, SS2 12 minutes, SS3 15 minutes and SS4 10 minutes. The organiser may configure them before racing.

• Each stage has a configured total gate count. The default is 10 gates per stage.

• The draw order must be generated and locked before a stage is opened.

• Each driver has one attempt per stage. A replacement attempt requires the organiser correction or overwrite workflow.

• One active marshal device may hold a stage lock at a time.

2. Penalties

Infraction	Deduction / result
Touch	-10 points per tap
Special Gate	-5 points per tap
Outrack	-3 points per tap
Jump Gate	DNF

• Penalty taps are recorded against the selected driver and stage.

• Each tap stores the point value that applied when it was recorded. Updating the shared preset affects future taps only; existing tap values remain unchanged.

• A Jump Gate violation is recorded using the DNF control, then the marshal enters the number of gates cleared.

3. Position points

Finishing position is determined by raw elapsed time. Point deductions do not change raw-time order.

Position	Base points	Position	Base points
1	100	21	45
2	95	22	44
3	90	23	43
4	87	24	42
5	84	25	41
6	81	26	40
7	78	27	39
8	75	28	38
9	72	29	37
10	69	30	36
11	66	31	35
12	63	32	34
13	60	33	33
14	58	34	32
15	56	35	31
16	54	36	30
17	52	37	29
18	50	38	28
19	48	39	27
20	46	40 and below	26

4. DNF, FINISH and DNS scoring

DNF base = max(20, points for the last registered position - 20).

DNF points = max(0, round(DNF base x gates cleared / total gates) - penalty points). A DNF at zero gates can score zero. Gate progress must be entered from 0 through the configured total before a new DNF result can be saved.

FINISH points = max(round(DNF base / total gates), position base points - penalty points). A FINISH result cannot fall below the Gate-1 DNF base floor.

DNS = 0 points.

When stage points are equal, FINISH ranks above DNF; DNF ranks above DNS. Historical DNF records with no saved gate count must be reviewed and corrected by the organiser rather than assumed to have cleared all gates.

5. Overall championship tie-breakers

• Higher net points in the final Special Stage.

• FINISH above DNF above DNS in the final Special Stage.

• More stages with a recorded result.

• Lower cumulative raw elapsed time across FINISH results.

• Lower race number.

6. Marshal and data handling

• The marshal must enter and save a marshal name before timing or recording penalties.

• The marshal reviews the captured time and penalties with the driver, confirms STOP, then saves the result.

• DNF gate progress is required before saving.

• A marshal link is event-specific and can be closed by the organiser.

• New stages cannot be claimed while Firebase is offline. If connectivity drops after a stage lock is acquired, the current run may continue locally and queue its result. The stage lock remains held until Firebase confirms the saved result after reconnection.

• The public results page is read-only.

7. Historical records and migration

• Do not delete or rewrite historical results as part of this release.

• The organiser Apply final penalty preset action changes shared rules for future taps only. Historical taps retain their saved point values.

• Legacy penalty records without a stored point value use compatibility fallbacks for their historical names. Any old Jump Gate record that is not already marked DNF must be reviewed manually.

• Export a JSON backup before applying the new Firebase rules or starting the dry run.

This v2 document supersedes the older v1 scoring PDF. Do not distribute the v1 PDF for this dry run.
