

BS-STYLE POINT RC TIME ATTACK

COMPETITION RULES & SCORING SYSTEM

Version 1.0 | 26 October 2026

A position-based points championship for RC crawler Time Attack, with dynamic DNF scoring and configurable point deductions for course infractions.

Purpose. These rules are intended for publication to competitors and marshals before an event. They describe the proposed BS-STYLE POINT RC TIME ATTACK scoring format. This is a custom local ruleset inspired by position-based off-road scoring, not an official Borneo Safari document.

Organiser: _____

Event / venue: _____

Event date: _____

1. Competition Format

The competition consists of multiple Special Stages (SS1, SS2, SS3, SS4 and any additional stages announced by the organiser). Each driver receives one official attempt per stage unless supplementary event rules state otherwise. The stage DNF cutoff must be announced before the driver starts.

Stage ranking is based on raw elapsed time. Point penalties do not add time and do not change finishing order. They are deducted from the points earned for that stage after the finishing position is determined.

2. Result Status

Status	Meaning	Stage points
FINISH	Driver completes the course before the stage cutoff.	Position points minus point deductions; minimum 0.
DNF	Did Not Finish: driver does not complete within the cutoff, or is officially recorded DNF under the published event rules.	Dynamic DNF base points minus point deductions; minimum 0.
DNS	Did Not Start: driver does not start the stage.	0 points.
PENDING	Leaderboard progress status: one or more stages have no recorded result.	No points for an unrecorded stage.

3. Position Points

Rank finishers in each SS by raw elapsed time, fastest first. The points below are base points before deductions. Drivers with exactly equal times receive the same position points.

Position	Base points	Position	Base points
1st	100	21st	45
2nd	95	22nd	44
3rd	90	23rd	43
4th	87	24th	42
5th	84	25th	41
6th	81	26th	40
7th	78	27th	39
8th	75	28th	38
9th	72	29th	37
10th	69	30th	36
11th	66	31st	35
12th	63	32nd	34
13th	60	33rd	33
14th	58	34th	32
15th	56	35th	31
16th	54	36th	30
17th	52	37th	29
18th	50	38th	28
19th	48	39th	27
20th	46	40th	26

40th place and every lower position receive 26 base points.

4. Dynamic DNF Points

To avoid making one DNF disproportionately costly in small fields, the DNF base score depends on the number of registered drivers. Finalise the roster before the first official run. Adding or removing drivers during the event can change the DNF calculation.

DNF base points = max(20, base points for the last registered position - 20)

Registered drivers	Last-position base points	DNF base points
5	84	64
8	75	55
10	69	49
15	56	36
20	46	26
25	41	21
26+	40	20

After the DNF base points are calculated, recorded point deductions are subtracted. The final stage score cannot be less than zero. DNS always scores zero.

5. Point-Deduction Penalties

Penalty values are deducted from stage points, not added to elapsed time. Each tap is one occurrence. The same incident must not receive both a time addition and a point deduction.

Penalty type	Deduction per tap	Application
Touch	15 points	Deduct 15 points for each recorded touch incident.
Gate violation	5 points	Deduct 5 points for each recorded gate violation.
Roll-over	5 points	Deduct 5 points for each recorded roll-over incident.

These are proposed starting values for this event and may be edited by the organiser before racing. Final values must be announced before the first run. The software stores the point value used for each tap; editing a penalty rule later affects future taps only and does not retroactively change earlier recorded penalties.

6. Stage Score Calculation

Finisher: Net stage points = max(0, position base points - total point deductions).

DNF: Net stage points = max(0, dynamic DNF base points - total point deductions).

DNS: 0 points.

Example	Calculation	Net points
8 drivers; 2nd place; one Touch	95 base - 15 = 80	80
8 drivers; 2nd place; two Gate violations	95 base - (2 x 5) = 85	85
8 drivers; DNF; one Gate violation	55 DNF base - 5 = 50	50

Example	Calculation	Net points
Deductions exceed base points	Minimum score rule applies	0

7. Overall Championship and Tie-Breakers

The overall championship score is the sum of a driver's net stage points across all Special Stages. The driver with the highest total points is the overall winner.

If two or more drivers tie on total points, apply these tie-breakers in order:

1. Higher points in the final Special Stage.
2. More stages with a recorded result.
3. Lower cumulative raw elapsed time across completed stages.
4. Lower race number.

8. Race-Day Procedure

Before racing: confirm the driver roster, stage order, stage cutoffs and shared penalty values. Publish the penalty list before the first run.

At the stage: select the correct stage and driver on the marshal device. Check that the device shows ONLINE if live synchronisation is required.

After the run: stop the timer. Review penalty tap counts and result status before pressing SAVE RESULT.

Manual stopwatch: prepare the manual time/status in the manual input section, review penalties, then save the result.

Offline operation: if the indicator says OFFLINE, the result may remain only on that device until synchronisation succeeds. Notify the organiser and follow the event backup procedure.

Backups: export a JSON backup before the event and after each stage or at regular intervals.

9. Corrections, Conduct and Disputes

Marshals must review the result and penalty taps before saving. Once saved, ordinary penalty counters lock for that driver and stage. Any correction must be made through the protected correction workflow by an authorised organiser and should be recorded in correction history.

Drivers must follow marshal instructions and course rules. The organiser may classify a serious breach as DNF or disqualification only under event rules announced before competition. A protest should identify the driver, stage, result in question and reason for review, and should be submitted promptly before the next stage begins where practical.

10. Rule Acknowledgement

By entering the event, each driver acknowledges that they have had the opportunity to read these rules and agrees to follow the published scoring and penalty procedures. The organiser should announce event-specific additions before the first official run.
